## REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: Claims 1-30 are allowed as the prior art, in particular Ang et al. (US 2004/0245950), Nishida et al. (US 5,218,491), or Grace (US 5,038,232), do not teach or suggest the applicant's invention. Claims 1 and 16 teach a method and apparatus for a disk drive. The distinguishing elements of the claims teach a spindle motor for rotating the disk at an operating speed in response to a spindle control current, the spindle motor comprising a plurality of windings which generate a back electromotive force (BEMF) voltage; a BEMF detector for generating a BEMF signal by comparing the BEMF voltage to a threshold; and a disk controller for: measuring a BEMF speed error responsive to the BEMF signal during a BEMF spindle speed control mode; updating the spindle control current in response to the BEMF speed error to drive the disk at the operating speed; measuring a wedge-to-wedge time representing a time period between each servo wedge; calibrating a reference time period representing an accumulation of a predetermined number of wedge-to-wedge times while the BEMF speed error is substantially zero; switching to a wedge spindle speed control mode; measuring a wedge time period representing an accumulation of a predetermined number of wedge-to-wedge times; generating a wedge speed error representing a difference between the reference time period and the wedge time period; and maintaining the disk at the operating speed by updating the spindle control current in response to the wedge speed error.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
